Marianne, thanks for editing this, I meant to send it sooner. Lupe

Dear Editor:

I would like to Thank Supervisor Steve Bennett and Assemblymember Lloyd Levine for bringing public attention to the health risks and dangerous effects of continuing public support for energy policies which cause green gas emissions, causing climate change and global warming. In the end I believe Science (not controlled by Oil and Gas Companies) will prevail. I also believe the public is weary of the arguments provided by Nuclear energy, which is equally harmful to humans and living creatures.

It is refreshing to see clean energy (such as Solar, Wind) business solutions growing along with continued clean energy exploration and also growing strong financial investment and consumer buyins. I have lived to see California stand up for innovation and solutions many times; makes me proud to live here.

As pointed out by Supervisor Bennett and Assemblyman Levine, clean energy policies will result in the creation of many gainful employment jobs. It will be awesome to see California and our entire nation focused in cleaning our Air and developing clean energy; our economy needs this.
