

BUT NO FIRE

Beginning in a small way the firemen first eliminated the grass fire hazard in the warehouse section, next bought their own badges, then received a new, streamlined red fire trailer and finally had a fire house built for them.

Their biggest job of the fire was a one alarm call broadcast over the army's P. A. system one bright Sunday morning to the whole Center. The fire, a small one at Hospital 3, was quickly brought under control.

With the fire equipment completed, the 18 firemen under their Chief J. E. Wimer and Assistant Chief W. B. Holmes went on duty 24 hours daily in three shifts of 8 hours each.

REMEMBER THE GARBAGE BOYS

The longing by all of the Center residents to be able to go outside of the Center occasionally was a daily reality for the garbage crew under Douglas Iwamoto who made two or three trips daily to the city dumps.

Perhaps that in some measure compensated for a hard job which consisted of emptying heavy garbage cans and picking up rubbish daily.

THE SANITATION CREW

A decided decrease in plugged up outlets in the women's latrines spoke well of the efforts of the sanitation crew under Katherine Sasaki. The garbage collection boys were thankful for this crew doing an unwelcome but necessary job, the results of which aided them immensely.

BRUSH WELDERS

"We paint anything" might well have been the slogan of the sign painters who for a fact have painted everything from miniature "geta" to the hospital canopies. Beginning with signs, the prize one of which read "Gentlemen's Quarters--Through these portals pass, we hope, the most beautiful girls in the world", the painters were, with the advent of the basket-ball season, deluged with requests to stencil T-shirts for the various teams. The sign painters were, with one exception, amateurs but the presence of latent talent was indicated in their fine workmanship.

HOT AND COLD WATER GUARANTEED

Responsibility for a steady supply of hot water for the 5,000 residents of this Center went to the technicians. They brought cool relief to the

administration row and the hospital patients with the installation of coolers and roof sprinklers. Work for the army included installation of showers.

"Remember Where You Got It"

Lessons learned in childhood about putting away their playthings held these stock clerks in good stead in their job of checking out and in of tools.

Four times daily these clerks checked the tools as they were taken out and handed in by the workers.

Ryoji Fujii as job estimator, computed the amount of materials and the job hours required to construct all jobs.
