ALERT

We all need to write letters insisting that our local officials prevent LNG facilities from endangering us.

A Typical LNG Tanker is More Than 3 Football Fields Long Taking 5 Miles to HALT

Holding 20 BILLION Gallons of Natural Gas

The energy content of a single typical LNG tanker is about fifty-five Hiroshima bombs

Strong winds, rough seas, earthquakes, metal fatigue, corrosion, leakage, human error, and now terrorists

WHY WORRY IF THE ENERGY INDUSTRY TELLS US LNG IS SAFE?

Vulnerable to a major industrial accident, earthquakes, or terrorist sabotage, the LNG facilities, tankers and associated pipelines would pose a realistic danger to our entire community every second of every day. Just think about it, a suicidal terrorist need only provide the trigger and the enormous volume of natural gas upon release would provide devastating explosive power for the mass destruction of our entire community.

Anyone who watched the Twin Towers collapse or saw photos of the USS Cole's hull exploded open by terrorists, should be deeply concerned about Ventura County becoming a major terrorist target.

Should we willingly permit such a dangerous industrial enterprise into our residential community?

Should we be forced to take such devastating risks of losing our homes, lives and families just so the energy industry can pipe its profits through our neighborhoods?

We are their guinea pigs. The "innovative technology" for the two LNG offshore facilities now being proposed has never actually been applied anywhere on earth before. Isn't that comforting?

California imports approximately 95% of its natural gas from our own USA and a small portion from Canada. The Un-American LNG will be imported from Asian Pacific Rim countries making us more dependent on foreign fuel!

DOES THE ENERGY INDUSTRY HAVE OUR COMMUNITY'S BEST INTEREST AT HEART?
