Summaries of Films Entered In First Annual Ecology Film Festival

*A FABLE FOR FLEAS-Alexander Weiss

This brief but dramatic animated film presents the basic, general ecological fact for what man is doing to the planet and himself. Fleas on a rat symbolize man on this earth.

*THE EIGHTH DAY-Charles F. Gagnon

The objective of this film is the actual history of man in the 20th Century--when he has a great potential for creativity, he turns this to conformity, waste and destructiveness.

*IT'S IN THE AIR-Missionary Lights

This mixed-media presentation deals with our ecologically wasted environment.

*LET A THOUSAND PARKS BLOOM-Lenny Lipton

This film is an explanation of People's Park in Berkeley and is a plea for parks in urban areas.

*RAINSHOWER-Dimension Films

The sights and sounds, the colors, textures, rhythms and moods of rain are captured in this film.

*STREAM-Communica

As a businessman's new model boat floats down a secluded stream in the country, it encounters various sources of pollution that eventually totally defiles it. The businessman, at the same time, thoughtlessly defiles nature.

*RABBIT HUNT-John Newton

Hunters invade a quiet place and disrupt it by their "technological marvels"--a truck, a snowmobile, the blast of a gun. Suggested by the poem Hunting A Hare by Vosnezensky.

*WARNING-WARNING-Harvey Richards

This film reveals the inter-relationship of the problems involved in protecting bay-river systems in populated areas. It suggests where to take hold of the tangled issues, to remedy past abuses and prevent future violations of our natural environment.

*SAVE THE BAY-David Best

A few of the realities that surround a still pressing issue are presented. An ecologist briefly sums up problem of San Francisco Bay and need for immediate attention if the Bay is to continue to "live".

BUMP CITY-Patrick O'Neill

A modern city (in this case, Los Angeles) is broken down into its components, the media that make it go. This film then stresses how these media all end up as "garbage" which is unresolved.

CHRISALIS-David Best

This film relates a story of man's blindness and impatience as he interrupts a process of natural evolution.

LEAVES OF GRASS, CONTINUED-John Bigby

Lines from Whitman's poetry and from "Democratic Vistas" are set against visual evidence of 20th century industrial America.

PERILS OF PRICILLA-Dimension Films

The problems of meeting the needs of food, warmth and a place to rest are seen through the eyes of a cat lost in a large city.

DDT-KNOWING IT SURVIVES US-Steve Rosen

The film deals with various aspects of DDT. It states the problem, effect and the use of DDT.

ALIVE AT CREEK BOTTOM-Ralph Diamant

Nature and pollution are dealt with in this film.

***FORTUNA-G.L."Woody" Garvey**

The objective of this film is to create a poetic juxtaposition of constructive and destructive (nuclear blasts), and neutral (the girl smoking) stands in life, and to cause the viewer to think about his relationship with these things because of the changing contexts.

WATER CYCLE-John Sunier

Nature and pollution are dealt with in this film.

***SMOG IS PINK-S. Pearman**

This film is a hand illustrated animated story of pink smog.

RUST-Lawrence Booth

The process of rusting in nature and the problems of garbage and waste are shown in this film.

DIHEDRON-Terry Hayes

The film compares and contrasts the extremes of the similar and different worlds of "man music". Nature, a little technology and a nude girl are also part of the film.

***Festival Award of Excellence Winners**
