MEMORANDUM REGARDING STORM OF DECEMBER 25-26
1921.

U. S. Weather Forecaster, at San Francisco, advises that at Point Reyes the telephone and telegraph line was blown out when the wind reached a velocity of 96 miles per hour. They have received no report since that time.

He also said that the wind at San Francisco, a comparatively sheltered point, reached 58 miles an hour, which is within six miles per hour of the highest velocity ever recorded here.

They have no stations between San Francisco and San Pedro.

The Weather Forecaster believes, judging from the position of the storm center and general features of the storm, that by the most conservative estimate the gale at San Simeon reached a velocity of at least 75 or 80 miles per hour, probably more.

San Francisco, Cal.
December 29, 1921.
