

February 7, 1931

Mr. Hearst.

Dear Sir,

1. The division fence between the upper and lower deer field was constructed of too light a grade of wire to hold the larger animals. They continually break thru and get injured in fighting. The upkeep of such a fence is heavy and there will doubtless be some animals killed if it is not fixed. We have all the material for placing a heavier wire thereon; all that is needed is the labor. Is there not some way whereby I can get this fence fixed in the near future?

2. The elephant is getting far too big for her house. The house is too small and not strong enough. She is acquiring a bad habit of breaking thru. Could we get a stronger and larger house for this animal?

3. How about the moving of the giraffes to the hill top? Construction of new barn etc.

Sincerely

C. N. Baldwin
C. N. Baldwin

2 The Giraffe house should also be moved up on the hill.

C. M. Psiqwin
G. V. B. B. B.
Sincerely

2. *Sincerely*

Construction of new barn etc.

3. How soon the moving of the Bixelles to the Hill jobs

of breaking them.

The elephant is getting fat. He is accumulating a bad habit of preening himself. He could get a larger house for too small and not strong enough to do for his house. The house
