LAND USE CODING/CONSTRUCTION TYPE DESCRIPTORS

- A. Specified land use is satisfactory, based on the assumption that any buildings involved are of normal construction, without any special noise insulation requirements.
- B. New development or construction should be permitted only on condition that a detailed analysis of requirements for building noise reduction performance be made and indicated noise insulation and air supply features be included in the design and construction.
- C. New development or construction should be undertaken only if (1) it is directly related to airport activities or services, and (2) special noise insulation and air supply features are included in the design and construction.
- D. A detailed analysis of the noise environment, considering noise from all urban and transportation sources should be made, and needed noise insulation features and/or special requirements for sound reinforcement systems should be included in the basic design.

Construction Type Descriptor B corresponds to a reduction of noise level (exterior to interior) of 35 decibels on the A-scale; and Construction Type Descriptor C to a reduction of noise level (exterior to interior) of 45 decibels on the A-scale. Agencies having jurisdiction over building standards shall treat these values as performance standards and shall require the owner of the building to show compliance by submitting engineering data or results of field tests in the completed building.
