February 9, 1922.

Mr. William Randolph Hearst, 137 Riverside Drive, New York City, N.Y.

Dear Mr. Hearst:

We have been having the worst and most freakish winter in the history of California--and weather at San Simeon has only been as elsewhere.

One thing the three winters has developed is that you will have to expect three or four heavy wind and rain storms ea each year of real violence, storms that would not be felt so much at a lower level.

I was there yesterday in a terrific storm and inside the houses, except for the sound of the wind over the chimneys, there was no feeling of it. The worst storm line each time is up the "plaza" side of A, and over the plaza top. There will be nothing but steps and pavement anyway in that line, and the hardiest planting will have to be in that general locality. Fortunately the earlier bad weather kept the gardeners from putting back the plants taken up in order to put better earth in the beds, so the plants in general are not injured. The chief loss is in geraniums, pelargoniums and smaller p plantings.

I would have written about Hazard; but thought you would be out here before this and would prefer to talk the question over.

The orchards are will along, but general outside work has been at a stand-still. Shipping has also delayed ceilings ind interior work, which are well along so far as Vander Loo's work is concerned—and of pretty fine quality.

Pabriary 9. 1922.

Mr. W. R. Hearst.
February 9, 1922, and declared matrix and Sheet #2.

The Bynes' address is--

niginal tele. sul

Arthur Byne.

Monte Esquinza, 6

Madrid, Spain.

Cabbled tonight for the Seville ceiling and the Granada house, as per your telegram.

control is that you will base to expect three or three can three or four heavy wind and rais element one. The can the control residence of the lower level.
